Aluminium Grille

APPLICATION	Computer / Equipment/Date centre Room
ACCESS FLOOR	ZT SC series Access Floor Systems
AVAILABLE SIZES:	600 x 300 mm 600 x 600 mm

Description

The ZT Aluminium Grille will used along with with all bolt on stringer raised floor systems. The air grille delivers and/or controls the flow of cool underfloor conditioned air into computer/equipment/Date centre room environments that are typically producing high amounts of heat.

Size

The standard ZT aluminium grille measures 600mmx300mm (half panel size), which allows it to be installed alongside a cut panel to complete the 600mm x 600mm access floor grid. When future changes are required, the air grille/cut panel can be re-located, as it is interchangeable with other access floor panels.

Design

The aluminium air grille is designed to deliver a large constant rate of air-flow to a computer/equipment room. The rate of air-flow to the room is dependent upon the pressure within the underfloor plenum, and can be easily adjusted when the air grille is fitted with a damper. The air grille has a natural anodised aluminium finish, which blends well with ZT's high pressure laminate panel finish.
